Degree/program	B.Tech	Specialisation	Computer Science	Project Team ID CSE02310184	
Academic Year	2020	Semester	8		
Name of student	Register Number	Department	Mobile Number	Email ID	
Shaik Riyaz	RA1611003010231	CSE	9952919265	sr9087@srmist.edu.in	
R.B.Srinivas Raju	RA1611003010184	CSE	8331055577	rr4725@srmist.edu.in	
Course Code	15CS496L	Course Title	Major Project		

Mission Statement

Working Title of the Project:		AN EFFECTIVE MODEL OF TERMINATING PHISHING WEBSITES AND DETECTION BASED ON LOGISTIC REGRESSION	
Project Site / Location		Chennai	
Name and address of the company / organisation (Applicable for projects with industry or industry support)		SRM Institute of Science and Technology, Kattankulathur, Kanchipuram District-603203	
Supervision Team			
	Supervisor	Co-Supervisor	External Supervisor (If applicable)
Name	Mrs.K.R.Jansi		
Designation	Associate Professor		
Department	Computer Science and Engineering		
Campus	Kattankulathur		
Telephone	9600082712		
E-mail	jansi.k@ktr.srmuniv.ac.in		

Faculty of Engineering and Technology

Problem (or) Product Description

Mission Statement

Problem (or) Product Description: TERMINATING PHISHING WEBSITES AND DETECTION
--

These days phishing is one of the greatest and the quickest developing risk in light of the fact that phishing assailants will get data which was entered by the client and phishing aggressors will utilize that data without the client information. At present personal information is the most important thing compared to money, So phishing website attackers are focusing on the personal information of the user and they taking advantage when the user enters there personal information in the phishing websites. So the main theme of these projects is to avoid misuse of personal information by phishing attackers. To overcome this problem machine learning algorithm (Logistic regression) is used and provided with the massive dataset. From that dataset, it trains the algorithm and helps in detecting the new web links which are fraudulent links. Attackers disguise their website as legitimate and try to get data from the user for which they make users visit a website and get the personal information that is needed. Before trying to enter into those websites it is important to check whether the given link is good or a phishing link. By checking the link we can save ourselves from the attackers and can keep our data safe.

Assumptions and Constraints

The system is Should run on anaconda navigator

Project Work – Student Log Book

Summary record of major progress meetings with supervisors			Working title of dissertation/research project:	
Meeting date & supervisors present	Progress since last meeting	Agreed programme of work and target dates	Other issues, e.g. facilities, supervision, training needs, etc.	Date of next meeting
13/10/19 Mrs.K.R.Jansi	Selected the base paper and prepared the project abstract.	Preparation of Power point presentation with details about the project such as its prototypes, architecture, software description.	Phyton programming and machine learning methodologies for phishing detection.	26/12/19
26/12/19 Mrs.K.R.Jansi	We prepared for the 1 st review. Power point Presentation and presented.	70% code to be prepared and begin writing the research paper.	Choose reference paper and work accordingly on the paper	06/02/20
06/02/20 Mrs.K.R.Jansi	Prepared 70% of the code and added all basic functionalities	Finish the coding part. Finish the research paper	Shift from video input to a live demo presentation	10/03/20

Meeting date & supervisors present	Progress since last meeting	Agreed programme of work and target dates	Other issues, e.g. facilities, supervision, training needs, etc.	Date of next meeting
10/03/20	Presented the final demo for review 3	Check for plagiarism in the research paper before final submission and make required changes.	Paraphrasing changes required in the paper.	14/04/20
03/05/20	Submitted the paper to the journal for publication.	Status of research paper publication will also be clear by the end of next month.	Conduct meetings through video conferencing.	20/05/20
05/06/20	Completed all the documentation work along with voice over presentation and demo video.	Documents submitted.	Nil.	09/06/20
09/06/20	Project successfully completed and presented in the final review through online mode.	Nil	Nil	-

Faculty of Engineering and Technology

Worksheet / Data collection / Observation etc

- In order to train we need a data set from which logistic regression can extract features and apply those on the newly given link.
- Those phishing links are taken from WHOIS data base a data base where the phishing links are stored for the future use.
- The data set we are using to train has 4 lakh plus weblinks combination of good and bad links.
- All these data links are stored in spread sheet.

Worksheet / Data collection / Observation etc

LOGISTIC REGRESSION:

- We choose logistic regression over other algorithm because of its speed and the accuracy
- Accuracy is found by dividing the data set into two 80% and 20% .The 80% data is used for the training of the machine learning algorithm.20% is the testing on the data set. In that 20% how accurately the algorithm gives the result gives the accuracy.
- In this system the accuracy is 96%
- This system takes in the input as a link and checks it from the features extracted and gives the output as good or bad.

```

In [14]: # Importing the dataset
import pandas as pd
dataset = pd.read_csv('spam.csv')

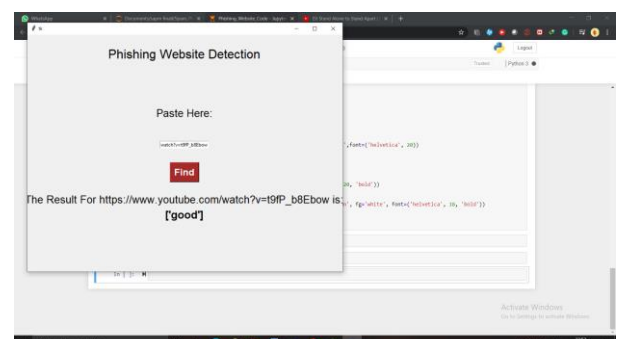

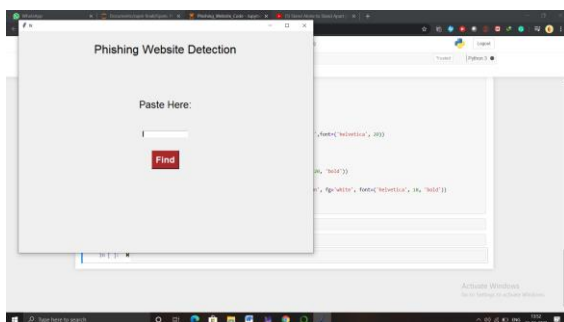

# Splitting the dataset into the training set and test set
from sklearn.cross_validation import train_test_split
X_train, X_test, y_train, y_test = train_test_split(dataset.drop('spam', 1), dataset['spam'], test_size=0.2, random_state=0)

# Feature Scaling
from sklearn.preprocessing import StandardScaler
sc = StandardScaler()
X_train = sc.fit_transform(X_train)
X_test = sc.transform(X_test)

# Fitting Logistic Regression to the Training set
from sklearn.linear_model import LogisticRegression
logreg = LogisticRegression()
logreg.fit(X_train, y_train)

# Making predictions on the test set
y_pred = logreg.predict(X_test)

# Accuracy of the model
print('Accuracy: ', logreg.score(X_test, y_test))
Accuracy: 0.96000000000000004
  
```
